

ROSHNI RAMESH MORE

Syracuse, NY 13210 | romore@syr.edu | +1 (315) 209-6002 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Syracuse University

Master of Science in Information Systems (Specialization: Data Science)

Syracuse, NY, USA

Jan 2025 - Dec 2026

WORK EXPERIENCE

Data Integration Specialist Intern

Central New York Health Home Network

Syracuse, NY, USA

June 2026 - Present

- Translating stakeholder reporting needs into dashboard requirements, KPI definitions, reporting logic, validation rules, user documentation, and supporting accurate interpretation of operational metrics and HIPAA-aligned data practices
- Developing SQL, DAX, & Power BI reporting solutions across multiple healthcare data systems to analyze program performance, clinical operations, & agency-level KPIs for leadership, operations, finance, & program teams
- Building automated analytical reports, dashboard refresh workflows, and quality-control checks to identify data entry gaps, documentation inconsistencies, and reporting issues while reducing dependency on recurring IT intervention

Data Science Intern

iConsult Collaborative, Syracuse University

Syracuse, NY, USA

Feb 2025 - Present

- Building a Python-based ETL pipeline integrating 3 enterprise APIs (Therap, Paycom, Sage) into a normalized PostgreSQL schema, consolidating fragmented HR, payroll, and compliance data into a single queryable analytical layer
- Designing PostgreSQL data models to structure consolidated API data into workforce and compliance KPI calculations across state and service line dimensions
- Developing a multi-KPI Power BI dashboard tracking staff retention rate, turnover rate, and daily missing notes with state and service line drilldowns, replacing manual reporting with a live operational monitoring system used by supervisors daily

Data Scientist

P.P. Cottage Industries

Pune, India

July 2022 - Nov 2024

- Built forecasting models to predict factory output & employee performance across production sites, uncovering productivity patterns, operational bottlenecks, & efficiency drivers used to support workforce planning & production decisions
- Conducted statistical analysis using hypothesis testing, correlation analysis, and K-means clustering to evaluate pricing, workforce productivity, product performance, and customer/seller behavior patterns
- Designed leadership-facing visual analytics using Matplotlib and Seaborn to translate complex model outputs and business performance trends into clear insights, actionable recommendations, and data-driven operational strategy decisions

Senior Software Engineer

Capgemini (Client: HSBC Bank)

Mumbai, India

Nov 2020 - July 2022

- Engineered automated validation workflows for HSBC's core financial systems, reducing regression testing time by 40% while strengthening defect detection, data accuracy, & operational reliability across mission-critical banking infrastructure
- Designed and executed API testing, monitoring, and data validation frameworks to verify system integrations, preserve data integrity, identify application defects, and improve quality across enterprise-scale banking platforms
- Built end-to-end CI/CD deployment pipelines & partnered with QA, development, and operations teams to automate release workflows, accelerate deployment cycles, support production stability, and enable consistent low-risk production rollouts

PROJECTS

Review Clustering Intelligence (NLP/ML Engineer)

- Automated cluster labeling and Aspect-Based Sentiment Analysis using GPT-4o-mini, translating unstructured review data into clear product insights for non-technical stakeholders
- Reduced 768-dimensional BERT embeddings to 2D/3D using UMAP and t-SNE, revealing natural product subcategory clusters across 90+ distinct appliance categories
- Automated cluster labeling and Aspect-Based Sentiment Analysis (ABSA) using GPT-4o-mini, extracting sentiment-tagged product aspects per category

Infectious Disease Surge Early Warning System (AI/ML Engineer), [Inferra Streamlit Dashboard](#)

- Built a global disease surge early warning system on WHO's COVID-19 data across 238 countries, engineering 16 epidemiological features including time-varying R_t generalized to held-out countries without retraining
- Applied SMOTE to counter 7% surge-class imbalance and validated zero-shot cross-disease transfer to RSV; recovered F1 via precision-recall recalibration & delivered actionable outbreak warnings up to 4 weeks ahead
- Surfaced regional R_t across Australian states as a model-independent 4-week leading indicator for downstream surge propagation via Granger causality analysis structural early warning requiring no ML inference

SKILLS AND INTERESTS

Languages & Databases: Python, R, Java, C/C++, SQL, MySQL, PostgreSQL, MongoDB, Oracle

ML/AI: Scikit-learn, TensorFlow, Keras, PyTorch, Spark ML, Generative AI, Prompt Engineering

BI/Analytics: Power BI, Tableau, Streamlit, Excel, DAX, Power Query, Matplotlib, Seaborn

Cloud/Tools: AWS, Azure, Snowflake, Docker, Kubernetes, Kubeflow, Jenkins, Git, PowerApps, Selenium, Appium, Postman
